

About the County Health Rankings & Roadmaps and Kitsap Core Public Health Indicators Report

About the County Health Rankings & Roadmaps

- <http://www.countyhealthrankings.org/>
- Developed by the Robert Wood Johnson Foundation and the University of Wisconsin Population Health Institute
- First released in 2010 for all U.S. counties, updates released annually but not comparable over time due to changes in definitions and sources
- Two overall ranks derived from 35 measures: Health Outcomes and Health Factors
- Ranking method rather than actual percents and rates is used for easier interpretation
- Rankings are presented for every county in the US; counties are ranked within states; for the first time in 2016, counties in different states can be compared
- Data sources must have data for *almost all* counties across the nation
- County-level data help counties understand what influences how healthy residents are and how long they will live
- **Rankings & Roadmaps Contents:**
 - 35 indicators in 2 sections and 6 sub-sections:
 - Health Outcomes
 - Length of life and Quality of life
 - Health Factors
 - Health Behaviors, Clinical Care, Social and Economic Factors, Physical Environment

About the Kitsap Core Public Health Indicators

- http://www.kitsapcountyhealth.com/information/data_indicators.php
- Developed in 2006 by Kitsap Public Health District Health Officer and Epidemiology staff, updated every spring
- Demographic and public health data for an overview of the health of Kitsap residents and surroundings
- Data are presented as rates and percentages using national, state and local data sources
- Data trends over time help to prioritize community resources for programs and policies that improve health
- Companion document has comparisons to Washington State

Kitsap Core Public Health Indicator Contents:

- More than 50 indicators in five sections:
 - Demographic profile
 - Who are we?
 - How healthy are we?
 - How healthy are our lifestyles and behaviors?
 - How safe and healthy are our surroundings?

KPHD Indicators and County Health Ranking Comparisons

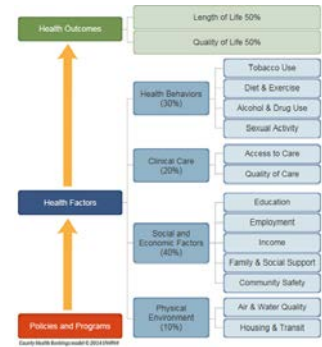

- KPHD Indicators are:
 - Generated from local, state and national data sources
 - Calculated from 1-3 years of data
 - Rates and percentages with statistical trend over time and comparison to WA State, include two points in time
 - County-level data, not sub-county or for sub-groups except some by age
- County Health Rankings are:
 - For comparing county to county within states; in 2016 added ability to compare counties in different states
 - Generated from national-level data sources
 - Calculated from 1-7 years of data, and sometimes data that are several years old
 - Ranks for categories; statistical trend over time for some measures; comparison to WA State and top U.S. county
 - Based on a somewhat different indicators each year so ranks are not comparable year to year
 - A method to identify potential challenges that counties might examine more closely
- **KPHD reviews Rankings but relies on local Indicators and Kitsap Community Health Priorities (KCHP) data to understand the health and well-being of our community**

County Health Rankings and Kitsap Core Public Health Indicators both:

- Raise awareness of community health
- Present a call to action
- Identify areas for more in-depth analysis

2017 County Health Rankings Summary for Kitsap County:

- Of 39 Washington State counties, Kitsap County ranks:
 - **10th** for Health Outcomes, “the health of today”
 - **4th** for Health Factors, “the health of tomorrow”
