

RV Waste Disposal Requirements

Wastewater from a recreational vehicle's showers, sinks, and toilets may contain fecal matter, dirt, food particles, oil and grease. It may also contain harmful bacteria or viruses, called pathogens, that can make people sick.

Pathogens found in RV waste can cause diarrhea, vomiting, skin infections, earaches, sore throats, colds, and flu. Some of these pathogens are shed by people and end up in shower water, others are in food particles that go down the drain.

Because RV wastewater can make people sick, it must be handled and disposed of properly. Please contact us at (360) 728-2235 if you have any questions. Both greywater and blackwater are considered sewage. Neither local nor state rules allow discharging sewage to the ground surface, surface water, groundwater, cesspools, or unpermitted sewage systems.
